

Customer information on REACH

On June 1st, 2007 the REACH Directive came into effect. This is a European Directive on the Registration, Evaluation, Authorisation and Restriction of Chemicals.

Galltec has carefully checked which obligations arise for Galltec from the REACH Directive. We have ascertained the following:

- At Galltec, no chemical substances or mixtures of chemical substances are manufactured, imported, processed or sold which fulfil the criteria of Article 57 of the REACH Directive and that are correspondingly to be classified as so-called SVHC – substances of very high concern.
- At Galltec no chemical substances or mixtures of chemical substances are manufactured, imported, processed or sold in annual quantities of more than one tonne.
- In products made by Galltec under normal conditions of usage, no chemical substances or mixtures of chemical substances are released.

The following conclusions can be drawn from this:

- Galltec does not incur any registration obligation with ECHA (European Chemicals Agency)
- With the publication of this customer information, Galltec has fulfilled its duty to provide information.

Please understand that we are answering any questionnaires etc. regarding REACH with this customer information.
